ANTH 160A2: Ancient Egyptian Civilization (3 units)

Description: Ancient Egyptian Civilization explores the ascendance, apex and decline of one of the world's most famous but perpetually misunderstood civilizations. Discussion of ancient Egypt, from its Mesolithic foundations in the savannahs of North Africa ca. 12,000 BCE through its Pharaonic Period and conquest by Alexander the Great in 332 BCE, is arranged in chronological and thematic units, each being placed in context of social, political, religious, and natural environments. For example, the course examines ancient creation myths, the diversity and origins of the gods, concept of the afterlife, religious symbolism of the built environment (temples, pyramids, tombs, etc.), and interconnections between other African, Mediterranean and Near Eastern cultures. During the semester students will learn about core concepts that have long impacted Western cultures and will explore a world vastly different from their own.

ANTH 170C2: Animal Minds (3 units)

Description: With intricate cultures, language, impressive technology, and complex social lives, humans seem very different from other animals. Do other animals experience and think about the world similarly to humans? And what does it mean if they do? This course explores the nature of animal minds, similarities and differences with human cognition, and how and why cognition evolves. We will explore what animals understand about their physical and social worlds, whether animals have emotions, concepts, foresight and memory, or a sense of fairness. The course will cover historical perspectives on animal minds, as well as the latest research on these exciting topics. Through comparing and contrasting human and non-human cognition, we can learn about human psychological uniqueness, its evolutionary origins, and fundamental properties of cognitive processes in general.

ANTH 316: Sex and Salvation in Latin America (3 units)

Description: What do witches in colonial Guatemala, Mexican nuns, born-again gang members in Honduras, Catholics undergoing in-vitro fertilization in Ecuador, and lesbian Afro-Brazilian Candomblé practitioners have in common? Their experiences tell us something about the complex intersection of sex, gender, and religion in Latin America. This course takes an anthropological approach to consider two central questions: (1) What role do religious ideologies and institutions play in the social construction of sexuality and gender in Latin America? (2) How do Latin Americans enact and contest gender power relations through their religious practices, thus contributing to processes of social change in the region? To address these questions, this class focuses on gender and its relationship to sexual desires and transgressions across diverse religious traditions from the pre-Columbian period to the present.

ANTH 323: Ancient Empires (3 units)

Description: During this class, we will be exploring the diverse nations of the Mediterranean that pursued the acquisition of empire in the ancient world: Pharaonic Egypt, Achaemenid Persia, 5th century Athens, 4th century Macedon, and Imperial Rome. More than only the respective "rise and fall" of each empire, we will examine how the rulers of each civilization depicted and justified their policies of conquest, how the pursuit of empire changed the cultures of these civilizations, and how each empire paved the way for the next. In the end, we will be learning how empires in general (mis)function, and how empires are justified to their participants, subjects, and enemies.

ANTH 325: Bodies in Medicine: Introduction to Medical Anthropology (3 units)

Description: This course introduces students to fundamental questions in medical anthropology through an engagement with surgical procedures that remake the body and its world. A practice at once familiar and strange, we center surgical interventions to ground abstract concepts of social and political relations firmly in the materiality of the human body. We examine the concepts of belief and belonging through analyzing male circumcision; cultural relativism and its limits through female genital cutting; the constitution of race through cosmetic procedures that reshape the eyes and nose; nationalism and patriotism through the rehabilitation of soldiers' bodies; the constitution of sex and gender through trans- and intersex genital surgeries; the ethical pull of kinship through in-family kidney donation; economic globalization through surgical tourism; and the concept of the individual subject through post-amputation phantom limb pain and the medical imperative to separate conjoined twins. These procedures invite us to consider the body as a site at which particular ideas about what is "normal" and what is "good" quite literally find their form. They make manifest the economic, racial, political and ethical forces through which contemporary life and value unfold. Building on the foundations of Tier I anthropology courses, this course introduces students to the unique ways that anthropology engages the practices and beliefs at the heart of medicine. This is a Tier II GenEd course.

ANTH 326: Domestication: The Evolutionary Entanglements of Humans, Animals and Plants (3 units)

Description: A common traditional definition of "domestication" is the process by which wild plants and wild animals are adapted and altered for human use. This course shows a more complicated, and more remarkable, story of the intimate long-term relations between humans and certain other organisms with whom we are co-dependent. To understand how domestication occurs, and the surprisingly short prehistoric time frame in which the most important domesticated species arose, we will explore the contexts in which the selective process was set in motion, including cultural effects, the built environment, and the inherent properties species that constrained the overall process. Domestication is a mutually affecting evolutionary relationship that develops over many generations, altering not only the animals and plants so important to humans, but also the human beings who have depended on them. This survey course integrates information from anthropology (including archaeology), biology, geography, and environmental science.

ANTH 327: Dog Thought (3 units)

Description: Dogs were once written off as a boring domesticated species with little to contribute to the scientific study of behavior, cognition, or human evolution. However, research in the past two decades has led to a resurgence of interest in dogs across scientific disciplines, especially those focusing on behavioral and cognitive evolution. In this course we will explore the scientific literature addressing how dogs understand their world, how dog psychology evolved during domestication, and what these processes may tell us about the evolution of other species, including our own.

ANTH 339: Archaeology of Death (3 units)

Description: How did ancient peoples dispose of their dead, and why? This course examines the various ways in which archaeologists investigate and interpret the death rituals of people in the past. Whether it be a pyramid built for a pharaoh or a pit filled with the anonymous skeletons of the poor and destitute, burial can tell us a lot. For the archaeologist, burials provide much information about beliefs and values; social divisions and status; kinship; health and diet; and identity. Drawing on case studies from a broad span of time periods and cultures, we will look at the evidence of tombs and monuments, inscriptions, grave goods, and skeletal remains to reconstruct how ancient societies confronted death.

Description: With a focus on Latin America, this course examines the historical, comparative, and current dynamics of two global commodities: illicit drugs and oil. These commodities, which depend on a U.S. consumer base, generate unfathomable wealth and unrelenting violence at local, national, and international levels. We follow them from extraction and production through consumption, examining socioeconomic and environmental impacts, their relationship to state corruption, and possible strategies for responding to the problems they create.

Description: This course focuses on the information about aspects of everyday life of the ancient Greeks and Romans that can be gleaned from archaeological evidence, as opposed to or in combination with written sources, and the various methodologies of the discipline of archaeology that allow us to reconstruct so much of the daily lives of ancient peoples. A comparative approach will be used so that students gain a sense of the shared cultural markers of these two civilizations, as well as their differences and the changes that took place in the Roman period. Topics to be considered are: house and home; clothing and body ornament; food and drink; partying and leisure activities; theater and spectacle; sport and competition; music and dance; shopping and money; schooling and children's lives; men's versus women's lives; the lives of slaves; and the worlds of artists and craftsmen.

ANTH 365: Introduction to Forensic Anthropology (3 units)

Description: This course provides an introduction to the field of Forensic Anthropology and the anthropology of mortality through lectures, discussion, guest lectures from local practitioners, and hands-on experience with skeletal remains, models, and casework scenarios. Forensic Anthropology, a specialization within Physical Anthropology, is applied in the modern medicolegal context to address questions relating to the cause of death or identity of decedents. This course will cover the history, significance, and various applications of the field, including domestic casework, mass disaster settings, and state-perpetrated human rights abuse contexts, with a particular focus on locally-relevant issues. It will cover introductory human osteology and odontology, methods for the recovery and location of human remains, the biological profile, sensitivity to grieving and traumatized families and communities, and the basic methods forensic anthropologists use to determine identity and cause of death. In addition to familiarity with human skeletal biology and examination methods, students will come away with a basic understanding how the broader field of anthropology approaches issues of death, mourning, and mortality.

Description: Museums of the 21st century are increasingly complex organizations, engaged with the critical issues of the day, whether by design or necessity. Few museums today can afford the luxury of being the "temples of treasures" of past centuries, with collections tended and displayed for the elite who have the leisure of appreciating them. Museums in the 21st century have been thrust onto the global stage and are dealing with issues resulting from political and religious conflicts, questions of legal and ethical rights to ownership of collections, international treaties and laws, recognition of native peoples and their voice in the disposition of their cultural patrimony, as well as engagement with local communities through exhibitions and public programming on issues such as poverty, homelessness, health, the environment, and many other challenges in both rural and urban settings. Globalization and technology have brought the world closer together, with resulting demands for greater accessibility to museum collections and curatorial knowledge. Museums, whether public or private, local or international, are more than ever accountable to and dependent upon multiple, often competing, constituents, and on communities and public engagement, while resources for the support of those museums are, in many cases, shrinking.

ANTH 373: Toxic! The Anthropology of Exposure (3 units)

Description: What are toxic exposures and how do they impact human health? From an anthropological perspective, the answers to these questions are important, but not straightforward. This Tier II undergraduate course combines medical and environmental anthropology with science and technology studies to develop a critical perspective on environmental health. Through readings, film, discussion, activities and guest lectures, course participants will explore three areas: 1) the history of toxic exposures, including major environmental disasters such as Chernobyl, Bhopal and Fukushima; 2) the politics of toxic exposures, including a discussion of how gradual economic and industrial development often results in the uneven distribution of toxic body burdens or "slow violence", and; 3) the uncertainty surrounding toxic exposures, including the contested illnesses and impure sciences that emerge from toxic settings around the world. Building on the foundations of Tier I anthropology courses, this course introduces students to the unique ways that anthropologists study environmental health, science, and activism.

ANTH 449: Women In Ancient Israel (3 units)

Description: This course is an intensive investigation of the life of the ancient Israelite woman. It presents a multidisciplinary approach toward reconstructing the social, economic, religious and political life of women in Iron Age Israel. Through readings and class discussion, students will explore the ways in which women contributed to their society throughout the eras of the Judges and of the United and Divided Monarchies (1200-587 BCE). Because women traditionally have been undervalued and marginalized, until recently little attention was devoted to this vitally important and stimulating topic. In consequence, students will be challenged to utilize multiple sources in their reconstruction of the lives of Israelite women. The sources used in this class will include (but not be limited to) archaeological, historical and art historical data, the witness of the Hebrew Bible and other pertinent texts, and anthropological and ethnographic studies of the roles of women in pre-industrial and Middle eastern societies.

ANTH 451: Gender and Violence in the Middle East (3 units)

Description: The Middle East region is often portrayed as a patriarchal, misogynist, and violent place in Western discourse. Terror, violence against women, and honor killings are increasingly popular topics of popular and academic interest in the region. Approaching these issues from a critical perspective this class seeks to answer: What are the power dynamics of gender relations in the Middle East? What are the gendered contours of the different forms of collective violence in the region? What are the limits and problems of the Western modes of thinking about gender and violence in the Middle East? How can we better understand the various gendered violence practices associated with the region without reproducing Orientalist and racist discourses?

Throughout the semester, we will use historical and ethnographic texts, films and

documentaries, fictive and journalistic writing to address these questions from an

interdisciplinary perspective. Course material will engage with a variety of issues, including

honor killings, female "circumcision" controversy, LGBT issues, and military masculinity, in

contexts ranging from Turkey to Palestine/Israel, and Lebanon to Algeria.

Description: This course aims to introduce students to on-going issues and debates central to the study of the classical cultures in the Mediterranean world, that are far from resolved. Instead of focusing on certain periods or certain media, the students will be able to evaluate scholarly arguments on Classical material culture, including but not limited to discussions of style, technological choices, historical and social contexts, archaeological scientific methods, and cultural heritage, to name a few, spanning several millennia from Aegean Bronze Age to Hellenistic times. Test cases include celebrated but controversial vases, sculptures, mosaics, temples, and metalwork. We will also study how scholarship shifts its focus to different types of controversies, as a result of more general social, political, and economic contexts. Some prior 300-level coursework on History, Anthropology, Classics, Art History, or related discipline is recommended, but not required.

ANTH 471: Human Cognitive Evolution (3 units)

Description: Human minds seem unlike those of any other animal. But what is it that makes human cognition unique? How and why did these traits evolve? This seminar will explore these questions by evaluating several leading hypotheses regarding human cognitive uniqueness.

The first part of the course will explore which aspects of human cognition are shared with other animals, and which may be uniquely derived in our lineage. For example, are humans the only animals capable of teaching, cumulative culture, language, or mental time travel? The second part of the course will explore evolutionary scenarios that may be responsible for the evolution of uniquely human cognition. For example, what roles did cooperative breeding, living at high population densities, or exploiting novel environments play in the evolution of our species' psychology?

ANTH 497D: Experimental Methods in Biological Anthropology (3 - 6 units)

Description: This class focuses on research methods in Biological Anthropology. Students will form groups of 4-5 and work on one of three projects throughout the semester. As a group, students will design experiments to test specific hypotheses about the evolution of the human locomotor system. Students will perform experiments and write up your study as a publishable paper. During the semester, students will learn how to use experimental equipment, design research projects, collect and analyze data, and present your results. Methods covered include motion analysis with infrared cameras, metabolic analysis (oxygen consumption to determine energy use), force analysis, and spatial tracking of locomotion in more natural landscapes. By the end of the course, students will have a more nuanced understanding of the science behind some of the latest discoveries in Biological Anthropology.

ANTH 530: Ancient Greek Technology (3 units)

Description: This course examines the technological achievement of Ancient Greeks from Prehistoric to Roman times. It is structured around key crafts, such as ceramics, stone and bronze sculpture, ivory-working, glass-making, carpentry, and weaving. The production sequence for each craft is presented, as well as the interconnectedness among different crafts. Visits to local craft studios promote an experiential learning. Students learn how craft practitioners carried out major technological projects, ranging from temple construction, to time-recording machinery, water engineering, and ship construction. The low social status of the workers is contrasted with the elevated appreciation of their products. The impact of environmental, economic, and cultural factors on the endurance, innovation, or abandonment of technological expertise is also addressed.

ANTH 549: Women in Ancient Israel (3 units)

Description: This course is an intensive investigation of the life of the ancient Israelite woman. It presents a multidisciplinary approach toward reconstructing the social, economic, religious and political life of women in Iron Age Israel. Through readings and class discussion, students will explore the ways in which women contributed to their society throughout the eras of the Judges and of the United and Divided Monarchies (1200-587 BCE). Because women traditionally have been undervalued and marginalized, until recently little attention was devoted to this vitally important and stimulating topic. In consequence, students will be challenged to utilize multiple sources in their reconstruction of the lives of Israelite women. The sources used in this class will include (but not be limited to) archaeological, historical and art historical data, the witness of the Hebrew Bible and other pertinent texts, and anthropological and ethnographic studies of the roles of women in pre-industrial and Middle eastern societies. Graduate-level requirements include meeting as a group, in advance (date to be determined) to organize the presentation of their papers. Each student will be assigned a "reviewer".

ANTH 551: Gender and Violence in the Middle East (3 units)

Description: The Middle East region is often portrayed as a patriarchal, misogynist, and violent place in Western discourse. Terror, violence against women, and honor killings are increasingly popular topics of popular and academic interest in the region. Approaching these issues from a critical perspective this class seeks to answer: What are the power dynamics of gender relations in the Middle East? What are the gendered contours of the different forms of collective violence in the region? What are the limits and problems of the Western modes of thinking about gender and violence in the Middle East? How can we better understand the various gendered violence practices associated with the region without reproducing Orientalist and racist discourses?

Throughout the semester, we will use historical and ethnographic texts, films and documentaries, fictive and journalistic writing to address these questions from an interdisciplinary perspective. Course material will engage with a variety of issues, including honor killings, female "circumcision" controversy, LGBT issues, and military masculinity, in contexts ranging from Turkey to Palestine/Israel, and Lebanon to Algeria. Graduate Students are expected to read additional texts, write additional reading responses, and will write a 20 page research paper which will be worth 40% of the final grade.

ANTH 562: Classical and Controversial: Critical Debates in Classical Antiquity (3 units)

Description: This course aims to introduce students to on-going issues and debates central to the study of the classical cultures in the Mediterranean world, that are far from resolved. Instead of focusing on certain periods or certain media, the students will be able to evaluate scholarly arguments on Classical material culture, including but not limited to discussions of style, technological choices, historical and social contexts, archaeological scientific methods, and cultural heritage, to name a few, spanning several millennia from Aegean Bronze Age to Hellenistic times. Test cases include celebrated but controversial vases, sculptures, mosaics, temples, and metalwork. We will also study how scholarship shifts its focus to different types of controversies, as a result of more general social, political, and economic contexts. Some prior 300-level coursework on History, Anthropology, Classics, Art History, or related discipline is recommended, but not required. Graduate level students will be required to present additional articles within class, as well as produce a longer, more in-depth, Final paper and presentation.

ANTH 571: Human Cognitive Evolution (3 units)

Description: Human minds seem unlike those of any other animal. But what is it that makes human cognition unique? How and why did these traits evolve? This seminar will explore these questions by evaluating several leading hypotheses regarding human cognitive uniqueness. The first part of the course will explore which aspects of human cognition are shared with other animals, and which may be uniquely derived in our lineage. For example, are humans the only animals capable of teaching, cumulative culture, language, or mental time travel? The second part of the course will explore evolutionary scenarios that may be responsible for the evolution of uniquely human cognition. For example, what roles did cooperative breeding, living at high population densities, or exploiting novel environments play in the evolution of our species' psychology? The formal requirements of this course are the same for graduate and undergraduate students. However, graduate students are expected to understand and engage with course topics at a deeper level than undergraduates, and to make connections to other areas of biological anthropology, psychological science, and evolutionary biology. Graduate students will be evaluated according to these additional expectations for both in-class presentation and discussion, and in their writing assignments.

ANTH 584: An Anthropology of Migration: The Borderlands of the American Southwest and the Mexican North (3 units)

Description: This course examines some recent anthropological approaches to migration with a focus on the construction of borders and boundaries as a key problematic in understanding 21st century migration policies and practices. Throughout the course, the students examine the socio-cultural, economic, political and historical conditions that have given shape to the contemporary US-Mexico border. Students will be putting into practice anthropological data collection methods and frameworks for data analysis. Students will do so by conducting interviews and doing an analysis of what they found that will form the basis on their three section presentations and their final presentations and papers. The course will offer the opportunity for peer-to-peer training opportunities between graduate and undergraduate students as well as cross-cultural educational experiences.

ANTH 597D: Experimental Methods in Biological Anthropology (3 - 6 units)

Description: This class focuses on research methods in Biological Anthropology. Students will form groups of 4-5 and work on one of three projects throughout the semester. As a group, students will design experiments to test specific hypotheses about the evolution of the human locomotor system. Students will perform experiments and write up your study as a publishable paper. During the semester, students will learn how to use experimental equipment, design research projects, collect and analyze data, and present your results. Methods covered include motion analysis with infrared cameras, metabolic analysis (oxygen consumption to determine energy use), force analysis, and spatial tracking of locomotion in more natural landscapes. By the end of the course, students will have a more nuanced understanding of the science behind some of the latest discoveries in Biological Anthropology. Graduate requirements include a 10-page review paper based on the experimental topic covered in group discussion.

ANTH 673: Stress, Development, and Health: A Biological Embedding Approach (3 units)

Description: In this course we take a lifespan/life history and evolutionary-developmental perspective to examine how environmental information guides the developing phenotype. The course begins with an overview of basic evolutionary-developmental concepts. Then we take up the great challenge in developmental science: Understanding the operation of the genome and how analysis of genetic and epigenetic variation contributes to our understanding of individual differences in brain development and function, from cell biology to physiology to emotional-cognitive states to behavior. We then move to examine how cues that guide developmental pathways shape health and well-being across the lifespan.
